EUROPEAN PRICE REPORT

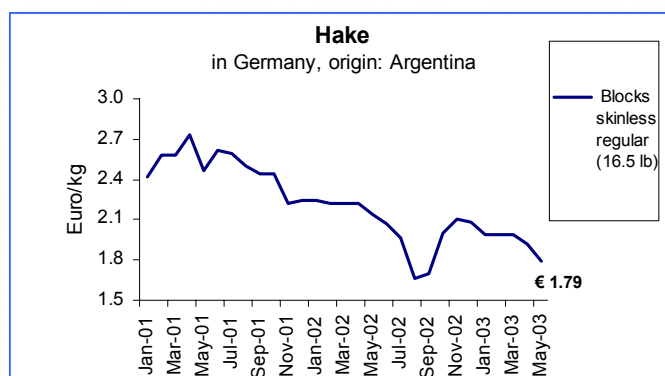

Issue 05/2003
15 May 2003

LATEST TRENDS

GROUND FISH

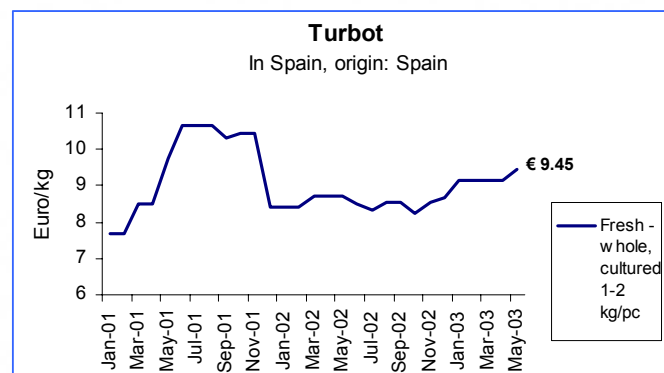

Relative stability in supplies of Alaska pollock means that boneless block prices remain unchanged in US\$ terms at around US\$2 300/MT cif Europe this month. Traders report that competition from hake and pollock is adding some downward pressure on prices.

Good availability of frozen cod fillets is reported. Price quotes for skinless interleaved fillets (pbi) from Iceland have fallen by around 7% in € terms, and by around 1% in US\$ terms, since February. According to UK sources, cheap haddock on the UK market is contributing to an overall weakening of prices in that market.

FLATFISH

Improved sales of farmed turbot in April have resulted in reduced stock levels at farm level. Reported prices for chilled round turbot are up at least 3% for May with price increases generally higher for the larger sizes. These increases come after a period of price stability since January and despite increased availability of supplies of wild turbot.

Demand for farmed turbot during May is expected to be stable. Price quotes for Dutch wild turbot in Italy are also up, 6-4% depending on size, despite some indications of weaker seafood demand in general in that market. Quotes for fresh Dutch sole in Italy are, in contrast, down between 10 and 20% since March.

Seabream	10

TUNA

Yellowfin catch levels in the Indian Ocean have been above average since January. Skipjack catches, in contrast, are down compared to previous years and trade sources are predicting possible supply difficulties for Indian Ocean canneries over the coming weeks. Some good fishing has been reported on the Atlantic side and Abidjan plants appear to be well covered. Supplies are also reported to be strong for European canneries and the downward price trend continues. Frozen round yellowfin, >10 kg, is reported at between US\$ 1 300 and 1 500/MT cif Europe depending on size and destination.

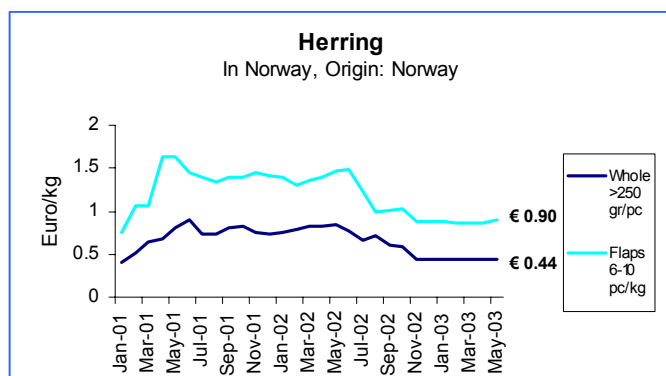

PELAGICS

Pelagic markets remain quiet and, with the exception of the matjes trade, this trend may be expected to continue going into the summer months. Stock levels for both herring and mackerel are now low in Norway and fob prices there have been edging up in recent months. With good demand reported for the final stocks of mackerel and larger herring,

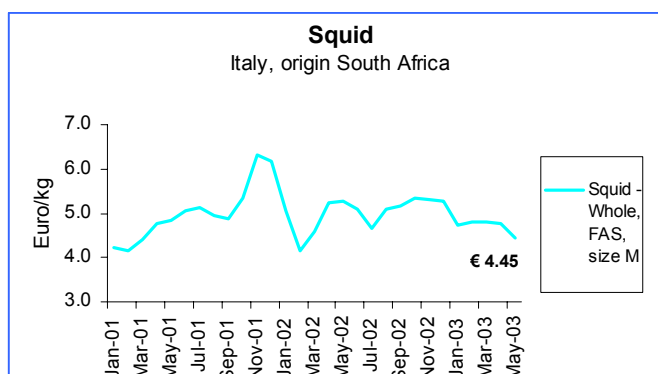

shortages are reported for 300 gram + whole herring and for the larger flaps (6-10/kg).

The recent increases in prices for larger herring are small consolation for herring exporters who have been facing difficult trading conditions since the collapse of herring prices last summer. Trade figures for the early months of this year reflect the ongoing difficulties in the market. German frozen herring imports fell by over 25% in January and average unit prices were down almost 30% (to €1.09/kg) compared to January 2002. There was also a decline, -15%, in the volume of processed herring imports despite a 7% fall in unit prices. On the supply side, Norwegian frozen herring exports, for the first quarter of the year, were down 17% to 95 000 MT with unit prices also down, -33%, to NOK 4.22/kg. Herring exporters at the recent ESE in Brussels were not optimistic on current price prospects particularly for small to medium sizes.

CEPHALOPODS

South African squid fishing is reported to be moderate. Cif price quotes to Europe in US\$ terms remain unchanged on last month which, with the depreciation of the US\$, means reduced prices in € terms.

SALMON

Although farmed salmon prices in the European market are fairly stable, somewhat higher prices for the 3-6 kg sizes are now being reported. However, prices do remain below break-even levels for most producers. In fact, Norwegian farmers are still paid less than NOK 20 per kg on the average with current export prices 5% lower than in 2002. Demand from the Far East for large size salmon is clearly down, leading Russian importers now to ask for lower prices on their purchases.

The EU continues to be Norway's largest export market for salmon with exports to that market increasing in April by 19% in value. Exports to non-EU markets last month grew by only 1%. For the first four months, Norway's total

salmon exports to the EU grew by 12% in value and 15% in volume. The prospect of an imminent end to the EU minimum import price regime has therefore created optimism in the Norwegian camp which now looks forward to higher sales volumes and less bureaucratic restrictions on their exports. Lately, the European Commission has asked Norway to evaluate the country's export levy on salmon exports to the EU, currently at 3%. European processors feel that the levy is discriminatory when compared to non EU importers such as Poland. As 2.7% of the current levy goes to the financing of the Norwegian Seafood Export's Council, a change in the levy formula would have repercussions for Norway's promotional and marketing activities for salmon in the European market.

SHRIMP

Demand for coldwater prawns in the UK is described as poor with prices weakening. IQF *pandalus borealis* (150-250/kg) are quoted ddp at £ 4.08/kg. Trade figures in other European markets for the beginning of 2003 suggest mixed price trends. Following a drop in imports of the higher priced shrimp from Madagascar and an increase in imports of cheaper Brazilian shrimps, unit prices for

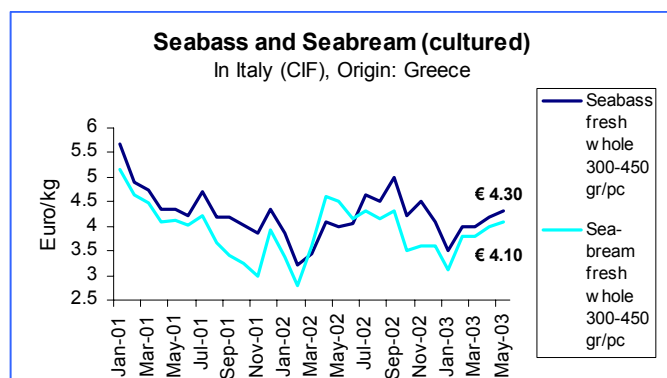

French frozen shrimp imports for the first 2 months of this year fell by 17% compared to the same period last year. In contrast, unit prices for Spanish frozen shrimp imports in January were up almost 10%, on January 2002, following a sharp drop in supplies from Argentina.

BIVALVES

At the start of the summer period, the French bivalve market is quiet. With much reduced domestic and Dutch supplies, the market has been importing live mussels from various origins including Denmark, the UK and Ireland, in recent months. Mussel prices for the 2002/2003 season have been above average and there are initial indications that the 2003/2004 season will follow this trend. Traders at the ESE referred to a partial closure of the Barfleur wild mussel fishery in France and predicted a below

average (although up on 2002/2003) Dutch mussel season for 2003/2004. At the same time, recent figures show increases in sales from non traditional mussel producing countries such as Greece and Norway. Norwegian mussel exports to EU markets more than doubled (to 900 MT) during the first quarter of this year compared to the same period last year. A continuation of such trends could result in downward pressure on mussel prices next season.

SEABASS/SEABREAM

Seabass and seabream prices are now definitely on the rise again. This is mostly a seasonal phenomenon which occurs every spring as the fish farmers finish their stock of the latest generation of fish produced. In fact, some farmers emptied their pens already at Christmas. The market expects therefore to see sharply higher prices over the coming months until fish from the next generation comes to market. The timing here depends on water temperatures but usually late June and July are the months when supply increases strongly. Unfortunately the summer months are not the months in which demand is the strongest, and bass and bream prices soften again.
